Fall 2012

**Assignment 1101 Feedback**

**Eric Dea, Danny Gibson, & Jon Piatos**

You ended up drawing one of the larger tasks, so there was certainly a lot of work to go around for everyone. In the end, unfortunately, there was not much there, especially given that there were three possible code generators. The newness of Ajax should not have been an issue either—you could have easily created a user page mockup, both read-only and editable. You could have also created a specific “change password” component, given that this activity may be used a lot. Overall, there was definitely a lot more that could have been done, with the lack of Ajax and the version control conflicts ultimately being the least of the issues here.

*3a* — As mentioned above, an understanding of how user interfaces are constructed is definitely not demonstrated very well in what was submitted, especially given that there were three of you to work on a range of possibilities. (/)

*3b* — Your code did not make it to any event handling implementations, so this also remains significantly undemonstrated, even more so than user interface construction. (−)

*3c* — Signs do show a general understanding of MVC, but admittedly there is not a lot to show for it either way. We’ll go vertical bar for this one. (|)

*4a* — Version control verge conflicts aside, the code you did write generally looks like it is in the right direction. But as mentioned, it is very little to go on. (/)

*4b* — As with *3c*, your code appears to demonstrate proper separation of concerns and MVC, but more is needed for full proficiency. (|)

*4c* — The code that is there is generally easy to understand. But more is needed to fully demonstrate this with this assignment. (|)

*4d* — The lack of production shows some need to use available resources and documentation better. (/)

*4e* — Two commits for work from three people, with the same message in both commits...that just won’t cut it, and it shows deficiency in your ability to use version control. (−)

*4f* — Submitted on time (just barely!). (+)
