Assignment 1016 Feedback

Eric Dea

3a — Your code shows a decent understanding of how user interfaces are structured, with some technology-specific glitches here and there (see *4a*). (+)

3c — Your code shows understanding (or, at least, compliance) with MVC as it applies to web pages. (+)

4a — Your Energy Preferences facsimile validates better than the iOS music one. The lone Energy Preferences HTML error is very easy (missing required attribute), but the iOS music errors are more varied and numerous. Still, they are all mostly fixable, some you wouldn't have known beforehand (with which I can then help you). But still mostly fixable. Otherwise the code looks pretty sound. (|)

4b — You separated the HTML and CSS in your pages quite well. (+)

4c — Your code is generally understandable, but it shows a mix of spaces and tabs. You should standardize on spaces; they are less prone to inconsistent displays. The indentation probably looks fine in your editor, but this is not guaranteed (look at your code in Chrome, for example).

Your comments are noted and appreciated; they are effective at communicating your intent. (|)

4d — You got a lot of things working on your own, which is fine here. Like you said, there are still some things to figure out, but for this assignment you did enough. (+)

4e — Excellent commit pacing and messages. (+)

4f — Submitted on time. (+)
